HatchSecure – NPSA (CPNI) approval confirmed

Modular Design for Versatile Security Solutions

HatchSecure stands out with its modular design, allowing for the seamless integration of various ancillary sensor devices. Whether it's float sensors, tamper contacts, or magnetic sensors, our system provides flexibility to adapt to diverse security requirements. This modular approach enables users to customise their security setup, whether they are safeguarding a single hatch or implementing a comprehensive solution for multiple access points.

Comprehensive Sensor Capabilities

Equipped with a range of built-in sensors, HatchSecure offers comprehensive hatch monitoring capabilities. From detecting tilts, vibrations, and impacts to identifying sustained attacks or cutting torches, our system provides real-time alerts and notifications to security personnel. Furthermore, all sensors are programmable and can be fine-tuned to meet specific user requirements, ensuring precise and reliable detection tailored to each application.

Scalability for Any Application

Whether securing a single hatch or implementing a complex security infrastructure across multiple access points, HatchSecure offers scalability to meet diverse application needs. Its modular nature and adaptable design make it suitable for a wide range of environments, from industrial facilities and warehouses to commercial buildings and critical infrastructure sites.

Introducing the new NPSA (CPNI) approved HatchSecure: Revolutionising Hatch Detection Systems.

In an era where security is paramount, ensuring the integrity of sensitive areas and assets is a top priority for businesses and organisations across various industries. One crucial aspect of security is the protection of hatches, access points that safeguard valuable resources or restricted areas. To address this need, we proudly present the new NPSA (CPNI) approved HatchSecure – our innovative multi-sensor hatch detection system.

Simplicity in Installation and Operation

Designed with user convenience in mind, HatchSecure is engineered to be simple and easy to use. The system seamlessly connects via an output board to any standard IDS alarm panel, whether existing or newly installed. This streamlined integration process means that HatchSecure can be installed and maintained by any trained security partner or integrator, minimising downtime and ensuring uninterrupted security coverage.

Comprehensive Sensor Capabilities

Equipped with a range of built-in sensors, HatchSecure offers comprehensive hatch monitoring capabilities. From detecting tilts, vibrations, and impacts to identifying sustained attacks or cutting torches, our system provides real-time alerts and notifications to security personnel. Furthermore, all sensors are programmable and can be fine-tuned to meet specific user requirements, ensuring precise and reliable detection tailored to each application.

Conclusion

In today's dynamic security landscape, HatchSecure sets a new standard for hatch detection systems with its modular design, comprehensive sensor capabilities, and user-friendly operation. By providing versatile security solutions that can be tailored to specific requirements, we empower businesses and organisations to enhance the protection of their assets and ensure peace of mind in an ever-evolving threat environment. With HatchSecure, safeguarding your hatches has never been easier or more effective.
